

IT-300 3G - NextG

IntelliTrac has once again “moved the goal posts” and set the new benchmark in the industry with the release of the IT-300 GPS Tracking system.

The IT-300 is suited to advanced applications requiring features such as:-

- Compatibility across all GSM,GPRS,3G & NextG Networks.
- Ultra Hi Sensitivity 66 Channel GPS
- Mobile Data TCP/IP Portal
- Serial & USB ports
- Analog & Digital Inputs
- Built in 3 Axis Accelerometer
- Backup Battery
- CANBUS Interface
- 1 Wire Interface
- WIFI
- Ruggedized Waterproof Enclosure

For more information please contact IntelliTrac on 1300 767 492

MyService Manager

December will see the release of MyService Manager a proactive service maintenance management tool allowing fleet managers and workshop managers the ability to be notified when vehicles, plant & assets are due for service.

Simple to use software menus allow you to calibrate odometer & hour meter readings, next service, and service increments to generate reports and email alerts when vehicles, plant & assets are due for service.

Additional functions allow workshops to action, comment and close all service jobs, therefore providing a full historical report on each vehicle's service history.

CEO Desk

Welcome to our December edition of Enews!

Firstly on behalf of all the staff at IntelliTrac I would like to wish you and your families and staff a Merry Christmas and a Happy, Healthy and Prosperous New Year.

2010 has seen IntelliTrac MyCars introduce small and medium business to the benefits of GPS Fleet Tracking. Needless to say the take up has been phenomenal and the praise, encouragement and referrals we have received from our customers has been overwhelming.

Mycars effectively reduced the entry level pricing of GPS tracking from \$1295 to an introductory price of \$249 in an attempt to capture a growing market in the SME environment. True to our philosophy of continuous and never ending improvement, Mycars has evolved since its release and now far out performs our competitor's offerings costing twice as much.

At IntelliTrac our commitment to our customers is displayed by our level of customer service via dedicated account managers and service technicians, and a willingness to listen to your suggestions and ideas to improve our products, software and service.

Your suggestions have resulted in the introduction of many new products and software features in 2010 including:-

- Mycars GPS - Budget Priced GPS Tracking
- Blitz Nav Lite - Messaging & Navigation Terminal
- Enhanced - Exception Reporting & Email Alerts
- Enhanced Messaging & Job Diversion Reporting
- Enhanced Driver Identification & Driver Reporting
- Driver Behaviour Reporting
- Device Health Check Reporting
- MyService Manager

We encourage your feedback and suggestions and look forward to bringing you new and innovative solutions in 2011.

Dean Calapai CEO

Papua New Guinea

Our CEO Dean Calapai experienced the warm hospitality of McConnell Dowell's and Consolidated Contractors' MCJV staff in Papua New Guinea during November as he was there to initiate the deployment of Intellitrac as a security monitoring and fleet logistics platform for vehicles and assets used in the construction of Komo Airport and the PNG Liquid Natural Gas Pipeline through the PNG Highlands.

IntelliTrac was chosen from a number of competitors due to the flexibility of the IntelliTrac IT-200 and the ability of the VMAP software to perform under slow internet conditions.

IntelliTrac's VMAP software platform is generally used exclusively by corporate clients but is available to all IntelliTrac customers free of charge under our normal application hosting environment.

Cleaning Up The Gold Coast

It has been almost 12 months since IntelliTrac undertook a major software development project with the Gold Coast City Council.

IntelliTrac has developed a cutting edge software platform under the guidance of the council to provide specialised tracking, recording, reporting and bench marking of Street Sweeper and Water Flush Truck activities.

IntelliTrac's software and GPS devices, sensors and data terminals provide:-

- Real Time Tracking
- Real Time Recording of Sweeper Activity
- Real Time Flush Truck Water Usage and Metering Recording
- Two way job dispatch messaging
- Unscheduled Job Recording
- In Vehicle Navigation & Routing
- Road & Asset Maintenance Recording & Email Job Dispatch

IntelliTrac with the guidance of GCCC and other councils have set the benchmark in Municipal GPS applications (particularly in waste management) which are now available to all local government organisations. If your organisation requires specialised GPS development, do not hesitate to contact the team at IntelliTrac.

Behind The Scenes

Ever wondered what happens behind the scenes at IntelliTrac each time you log in to track your vehicles?

There are many facets in the IntelliTrac world, starting from design & development of GPS devices, to manufacturing and writing the firmware (GPS device software) that makes them work.

A software team develops, maintains and is constantly improving the software that is used every day to track vehicles & generate reporting.

Of course we can't forget the mapping team from www.streetdirectory.com.au that is constantly updating maps and street & suburb data.

A Tier 1 Data Centre in Melbourne's CBD is the home of the infrastructure that stores information and provides a central point for all GPS devices & users.

At IntelliTrac our customers have a dedicated Account Representative, Systems Engineer, Service Advisor and Installation Technician to ensure a seamless purchase, commissioning, training and after sales support of their GPS Systems.

It's the people behind the scenes at IntelliTrac that make us different from other GPS providers. At IntelliTrac we focus on bringing real solutions with tangible benefits to our customers, backed by an unmatched level of customer service.

Holiday Closure

IntelliTrac's office will be closed from the 23rd of December 2010 & re-open on the 10th January 2011. During that time our 24 hr security monitoring centre will remain open.

Urgent matters may be communicated via Contact Us on our website or by leaving a voice message on our office phone system. Account managers, software support and service will remain on call and available as usual during this period.
